

DARKOWL™

We are the darknet experts

We are the world's leading provider of DARKINT™, darknet intelligence. DarkOwl Vision, the world's largest commercially available database of darknet content, provides the means to efficiently detect the presence of your proprietary information on the darknet and mitigate damage prior to the misuse of your sensitive data.

DarkOwl Vision darknet intelligence

The DarkOwl Vision engine automatically, continuously, and anonymously collects, indexes, and ranks actionable darknet data. Because our platform collects and stores data in real-time, darknet sites that frequently change location and availability can be queried in a safe and secure manner without having to access the darknet itself. A variety of product solutions help you easily access the DarkOwl Vision platform to make darknet intelligence an integral part of your existing security architecture.

Darknet big data

The DarkOwl Vision engine crawls anywhere from 10 - 15 million darknet domains on a daily basis. The database contains content from sources including Tor, I2P, IRC channels, FTP servers, paste sites, hacker forums, high-risk surface net sites and more, enabling you to access and search a large volume of both current and historical darknet data.

DarkOwl Vision indexes more DARKINT™ in **one hour** than an analyst can discover in **one month**.

Customers

FORTUNE 500

We count top companies in the world among our customer base.

ACROSS SECTORS

Whether finance, healthcare, retail, manufacturing, tech, or beyond - We have a solution.

INTERNATIONAL

Teams in the U.S. and EMEA provide localized support.

Add DARKINT™ to your information security program with the DarkOwl Vision platform.

WHAT'S ON THE DARKNET?

- SECURE CREDENTIALS
- PERSONAL INFORMATION
- INTELLECTUAL PROPERTY
- EXECUTIVE INFORMATION
- COUNTERFEIT DOCUMENTS
- COPYRIGHT INFRINGEMENT
- STOLEN CREDIT CARDS
- VIRUSES, MALWARE AND EXPLOITS

We offer a complete range of darknet solutions to supplement existing architectures: From our DARKINT™ Footprint reports, which provide a measurement of existing levels of darknet exposure, to Professional Services and everything in between. We can monitor the darknet on your behalf with our Monitoring offering or you can search darknet content with our SaaS product. Data Feeds and an API both allow even further, automated integration into existing security solutions.
